Requirement extraction
Original query only
1-6 factual requirements
Evidence selection
Top-5 full parents
Request-local span IDs
Claim synthesis
Supported requirements
Verified spans only
Claim and coverage review
Subject, condition, number, version
One bounded rewrite if needed
Deterministic checks
IDs, bindings, numeric provenance
Reject unsupported claims
Code-computed status
All / some / none supported
answered / partial / insufficient
Source resolution and original PDF
Map span to canonical parent, document, version and physical page
The model does not generate filesystem paths or citation identities
Semantic review is model-based.
Valid IDs and numbers do not
prove factual completeness.
